Reimagining the Future of Project Controls With AI

Developing innovative features for today and tomorrow. We work with our client's unique challenges and leverage our core functionality whilst developing new capabilities. Proteus offers true cloud flexibility and accessibility allowing you to keep your organisation agile. All our clients automatically benefit from frequent new releases with improvements and updates.

We are continually looking into the future. With innovation in our DNA, we have an exciting development roadmap including the following AI supported automation:

AI Proposals - A future where Proteus produces the cost estimate, develops the WBS and even writes the proposal.

AI Resource Planning - A future where Proteus optimises the team to deliver a project based on availability, capability and value.

AI Project Management - A future with automated and optimised forecasting and reporting.

AI Timesheet and Utilisation - A future with timesheet automation and optimisation to maximise utilisation and therefore revenue.

Proteus

An Enterprise Partnership
As an enterprise solution provider, we are proud of what sets us apart: agility, flexibility, and a client-first approach. We work in close partnership with all our customers and are able to achieve amazing results based on a solid foundation of trust and collaboration. We offer tiered pricing solutions and bespoke services to ensure every client gets the right outcome for their business.

Proteus

Project Controls Software

The end-to-end, integrated solution for engineering projects

Proteus is a cloud-based SaaS project management and controls tool that brings project data into a single place, designed to integrate with a client's existing digital ecosystem.

Addressing the challenges presented by today's capital delivery project market, Proteus is used by engineering teams to deliver profitable projects, on budget and on schedule every time.

Proteus is packed with powerful project controls features designed to provide unrivaled visibility and control across the full project lifecycle.

Proteus is integrated with leading CRM, ERP, HR, and scheduling tools and brings everything together into one space.

Work. Simplified.

Project Controls Designed by Engineers for Engineers

Proteus simplifies project controls and gives fast accurate visibility of project performance. A customisable dashboard for each project allows users to get an insightful overview of all aspects of the project. The dashboard automatically aligns to show different metrics for fixed-price or reimbursable.

Forecasting can be done automatically at the resource level by selecting linear, front-end loaded, back-end loaded or S-curve loaded.

With a simple interface to allow multiple users to collaborate using real-time project data, all project and earned value data is presented in a table format and can be exported externally for further analysis.

Key Proteus Project Controls Functionality

- Control costs and schedule in real-time.
- Fully traffic lighted to inform PM of risks.
- Develop detailed WBS.
- Track each work package individually.
- Management of change / Variations.
- Manage all project finance in one place, including invoicing and purchase-to-pay.
- Allocate resources to project CTRs.
- Track budgets against baseline via integrated resource tracking.
- Write time with built-in timesheet system.
- Visualise resource constraints.

Why Proteus? A Game Changer.

We drive value for clients who work on complex projects, moving them away from ineffective workflows and spreadsheets that are simply not fit for purpose.

For many of our clients, the management of multiple activities, projects, and workflows is cumbersome. Multiple teams use a range of systems. There is no consolidated view of operational data and no single source of truth. Tracking the project on each part of the WBS accurately is critical for any project. Automatically tracking time, cost and deliverables using Proteus is a game changer.

Get full visibility over project data

- Consistency & control across workflows
- Integrated, accurate data
- Automated dashboards & reporting
